## White-Tailed Deer Spotlight Survey - 2005

			White Tailed Deer Observed			erved	Total Deer	Density
Count	Date	Visability Acres	Bucks	Does	Fawns	Unidentified	Observed	Acres/Deer
1	September 27, 2005	75	5	12	4	5	26	2.88
2	October 9, 2005		3	7	4	5	19	3,95
3	November 5, 2005	75	6	28	5	1	40	1.88
4	November 7, 2005	75	1	20	0	4	25	3.00
Total		300	15	67	13	15	110	2.73

## **Cumulative Census Statistics:**

Whited-Tailed Deer Den	2.73	Acres per Deer						
Doe-to-Buck Ratio	4.47	816 W 1 18 W 200						
Fawn-to-Doe Ratio	0.19							
Percentage of Deer Population by Category								
	Bucks	15.8%						
	Does	70.5%						
	Fawns	13.7%						
Estimated Deer on Seve	304							
	Bucks	48						
	Does							
	Fawns	42						
Recommended Harvest		39						
1 Buck/150 Acres*	Bucks	6						
1 Doe/25 Acres*	Does	33						
Estimated Post Season	3.13	Acres per Deer						

<sup>\*</sup> Recommended Harvest Rates for Gillespie County by TPWD

## Harvest Recommendations:

- Heavy Emphasis must be placed on the harvesting of Does.
   Over the last several years the ranch has harvested fewer does than harvest estimates have indicated and, as a result, the population is approaching overpopulation.
- 2) The harvest of spike bucks should be included in the buck harvest quota, not added to it. Harvesting spikes will remove poor quality bucks from the herd at an early age.
- 3) The harvest of young, immature bucks should be restricted. Deer body characteristics, in addition to antier characteristics, should be used to determine the relative age of bucks on-the-hoof.

## Records Management:

As a minimum, record keeping should include:

- a) Sex
- b) Field dressed weight
- c) Antler measurements: Inside Spread & Number of points
